A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 17, 2008 has been entered.

Claims 2-4, 6-14, 16-19, 21, 22, 49, and 52-54 are allowed.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 32-35, 37, 38, 50, 51, and 55-57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bee (EP 0395145) and Jones (US 5126156) in view of Gabby et al (US 3800036).

Bee discloses a milk shake composition including milk, cream, sugar, stabilizers, and flavor, wherein the milk shake is frozen (see entire document, especially Example II).

Jones discloses the conventional freezing of dairy pellets as disclosed by Applicant (see entire document).

The claims differ as to the specific recitation of inulin.

Art Unit: 1794

Gabby et al disclose the use of inulin in frozen dairy compositions (see entire patent, especially claim 12).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to use inulin as taught by Gabby et al in that of Bee and Jones because the use of inulin in frozen dairy compositions as a bodying agent is conventional in the art.

Applicant is using known components to obtain no more than expected results.
